DETAILED ACTION

Acknowledgment is made of applicant's preliminary amendment filed 9/21/07.

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Be-* 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thonngton*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969). A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement. Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 12, 13 and 16 are rejected on the ground of non-statutory obviousness-type double patenting as being unpatentable over claims 1 – 25 of U.S. Patent No. 6,912,923.

Regarding claim 12, although the conflicting claims are not identical they are not patentably distinct from each other because all of the limitations in the claims are included in the 6,912,923 patent.

Regarding claim 13, the second magnetic ring is a multi-pole magnetic ring (See claim 1 of Froehlich et al.

Regarding claim 16, a single board is provided for receiving sensors communicating with said first and said stator elements and for receiving said at least one magnetic sensor communicating with said second magnetic ring (See claim 9 of Froehlich et al).

Allowable Subject Matter

3. Claims 14 – 15 and 17 – 22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Apel et al (6,201,389) disclose a device for determining the angular position of a rotating shaft.

Pattok et al (7,021,160) disclose an apparatus for sensing position and/or torque.

Jin et al (6,860,159) disclose a rotation sensor.
